

Dual Inverter Technology

LG has taken Inverter Technology one step further using a dual rotary inverter compressor to ensure an excellent performance, maximum efficiency, faster cooling, longevity, and more silent air conditioners. Thanks to the dual inverter technology, LG air conditioners have a wider frequency range than air conditioners using conventional inverter technology. The dual inverter technology allows LG air conditioners to vary the frequency from 10Hz to 120Hz therefore the compressor can go slower thus saving more on electricity, and faster therefore it will be more efficient in reaching the desired temperature. The inverter compressor is also guaranteed for 10 years.

Active Energy Control

Depending on how many people are in the room and the level of activity, Active Energy Control allows the user to cap the energy consumption of their LG air conditioner. So if there is less activity in a room the machine can be told not work as hard to cool it down.

Features:

Heating/Cooling/Fan/Dehumidifying Functions, DUAL Inverter Technology, Auto Cleaning, gold Fin, Rapid Cooling/Heating Functions, Smart Energy Display (displays the set temperature and current consumption level, Timer, Low Noise Levels, Double Protection Filter, Active Energy Control, Comfort Air, Horizontal & Vertical Air Flow Swing, R32 Refrigerant
